What I have done and learned during the DSML course

- The basic mathematical principles of machine learning algorithms are explored
- Through the code of concrete implementation, deepen the mathematical principles of machine learning
- Deepen the understanding of parameter selection of different machine learning algorithms through statistical principles
- In the course, I learned how to use visualization to present complex problems to others

The qualities

- Willingness to communicate with professors
- After class, do math proof and material reading
- Not only the pursuit of practical application, but also theoretical derivation, deepen understanding
- Take the time to debug and run your own code
